3. Choose PNG format (or SVG if you want to convert yourself)
4. Select "High Quality" or "Original" size
5. Save with the exact filename listed above

From IconApe:

1. Click the link
2. Scroll to download section
3. Choose PNG format
4. Select size (300-500px recommended)
5. Click download and save with correct filename

Post-Download Processing

After downloading, you may want to optimize the logos:

Option 1: Use the resize script

I can create a Python script to batch resize and optimize all downloaded logos.

Option 2: Manual processing

- **Resize:** Keep aspect ratio, target width 200-400px
- **Format:** Ensure PNG with transparency
- **Optimize:** Use tools like pngcrush or optipng to reduce file size
- **Location:** Place in `app/src/main/res/drawable/`

Alternative: Automated Batch Download Script

If you'd prefer, you can also: 1. Download logos manually to a folder (e.g., `tmp/logos/`) 2. I can create a script to batch process them (resize, optimize, rename) 3. Move them to the correct drawable folder

Let me know if you need help with any of these steps!
